

Given an array of integers **arr**, replace each element with its rank.

The rank represents how large the element is. The rank has the following rules:

- Rank is an integer starting from 1.
- The larger the element, the larger the rank. If two elements are equal, their rank must be the same.
- Rank should be as small as possible.

Input Format

First line contains an integer **n**.

Second line contains an array of integers of size **n**.

Constraints

$0 \leq \text{arr.length} \leq 10^5$

$10^9 \leq \text{arr}[i] \leq 10^9$

Output Format

Returns an array.

Sample Input 0

```
4
40 10 20 30
```

Sample Output 0

```
4 1 2 3
```

Explanation 0

40 is the largest element. 10 is the smallest. 20 is the second smallest. 30 is the third smallest.

```
1 import java.io.*;
2 import java.util.*;
3
4 public class Solution {
5
6     public static void main(String[] args) {
7         Scanner sc = new Scanner(System.in);
8         int n = sc.nextInt();
9         int arr[] = new int[n];
10        for(int i = 0; i < n; i++){
11            arr[i] = sc.nextInt();
12        }
13        int copyArray [] = arr.clone();
14        Arrays.sort(copyArray);
15        int pos[] = new int[n];
16        int count = 1;
17        pos[0] = count;
18        for(int i = 1; i < n; i++){
19            if(copyArray[i] != copyArray[i-1]) count++;
20            pos[i] = count;
21        }
22
23        int ans [] = new int[n];
24        for(int i = 0; i < n; i++){
25            int idx = 0;
26            for(int j = 0; j < n; j++){
27                if(arr[i] == copyArray[j]){
28                    idx = j;
29                    break;
30                }
31            }
32            ans[i] = pos[idx];
33        }
34
35        for(int i = 0; i < n; i++){
36
37            System.out.print(ans[i] + " ");
38        }
39    }
```

[40, 10, 20, 30]
→ [4, 1, 2, 3]

arr [40, 10, 20, 30]
copyA [10, 20, 30, 40]
pos [1, 2, 3, 4]
ans [4, 1, 2, 3]

414. Third Maximum Number

Solved 

Easy  Topics  Companies

Given an integer array `nums`, return the **third distinct maximum** number in this array. If the third maximum does not exist, return the **maximum** number.

Example 1:

Input: `nums = [3,2,1]`

Output: `1`

Explanation:

The first distinct maximum is 3.

The second distinct maximum is 2.

The third distinct maximum is 1.

Example 2:

Input: `nums = [1,2]`

Output: `2`

Explanation:

The first distinct maximum is 2.

The second distinct maximum is 1.

The third distinct maximum does not exist, so the maximum (2) is returned instead.

Example 3:

Input: `nums = [2,2,3,1]`

Output: `1`

Explanation:

The first distinct maximum is 3.

The second distinct maximum is 2 (both 2's are counted together since they have the same value).

The third distinct maximum is 1.

Java   Auto

```
1  class Solution {
2      public int thirdMax(int[] arr) {
3          long fMax = Long.MIN_VALUE;
4          long sMax = Long.MIN_VALUE;
5          long tMax = Long.MIN_VALUE;
6
7          for(int i =0 ;i<arr.length;i++){
8
9              if(arr[i]== fMax || arr[i]==sMax || arr[i]==tMax)continue;
10             if(fMax <arr[i]){
11                 tMax=sMax;
12                 sMax=fMax;
13                 fMax= arr[i];
14             }
15             else if( fMax > arr[i] && sMax <arr[i]){
16                 tMax = sMax;
17                 sMax = arr[i];
18             }
19             else if(fMax > arr[i] && sMax > arr[i] && tMax <arr[i]){
20                 tMax = arr[i];
21             }
22         }
23
24         if(tMax== Long.MIN_VALUE)return (int)fMax;
25         else return (int)tMax;
26     }
27 }
```

HW_Maximum Product of 3 Numbers

Problem	Submissions	Leaderboard	Discussions
---------	-------------	-------------	-------------

Once upon a time, there was a mathematician named Max who loved solving number puzzles. One day, he was given an array of integers and was challenged to find **the maximum product of three numbers** from the array.

Max eagerly accepted the challenge and began working on it. Help Max to find the maximum product of three numbers.

NOTE:- After answering the question, attempt the related question in the linked resource to improve your understanding of the question . Click [here](#)

Input Format

An integer **N**, which is the size of the array.

N integers, depicting the elements of the array.

Constraints

```
- 3 <= N <= 1000
- -1000 <= arr[i] <= 1000
```

Output Format

Return the **maximum product of three numbers** from the array.

Sample Input 0

```
5
-7 3 -5 2 4
```

$$[-7, 3, -5, 2, 4]$$
$$3 + 2 + 4 = 9$$
$$-7 - 5 + 4 = -8$$
$$3 \times 2 \times 4 = 24$$
$$-7 \times -5 \times 4 = 140$$

$$[-7, 3, -5, 2, 4]$$

So \rightarrow
$$[-7, -5, 2, 3, 4]$$

Submitted Code

```
Language: java 15
1 import java.io.*;
2 import java.util.*;
3
4 public class Solution {
5
6     public static void main(String[] args) {
7         Scanner sc = new Scanner(System.in);
8         int n = sc.nextInt();
9         int arr[] = new int[n];
10        for(int i=0;i<n;i++)arr[i]=sc.nextInt();
11
12        Arrays.sort(arr);
13
14        int max= Math.max((arr[0]*arr[1]*arr[n-1]),(arr[n-1]*arr[n-2]*arr[n-3]));
15        System.out.print(max);
16    }
17 }
```

$$[-8, -4, 1, 2, 4]$$
$$-8 \times -4 \times 4 = 128$$
$$1 \times 2 \times 4 = 8$$
$$[-8, 1, 2, 3, 4, 5]$$
$$-8 \times 1 \times 5 = -40$$
$$3 \times 4 \times 5 = 60$$
